

DATASHEET

Thermal Protector CR6

Type series R6

Construction and function

Switchgear consisting of a mobile and circumferential contact bridge (1), a contact bearing pin (2), a spring snap-in disc (3) and a bimetallic disc (4) which is riveted into one another, undetachable and fixed in a positive lock and self-aligning between a non-conductive floor of a housing (5) and an insulating ceramic bearing (6) with two integrated stationary contacts (7) as electrodes. At the same time, the switchgear is supported by the spring snap-in disc (3) with the contact bridge (1) acting as a transfer element for electric current which is held between a supporting collar and a circumferential ring. As such, the bimetallic disc (4) underlying it, that is also stuck out from the contact bearing pin (2), can continuously work (exposed) by mechanical loads without the contact pressure defined by the spring snap-in disc (3) diminishing. As soon as the bimetallic disc (4) reaches its rated switching temperature, it effectively springs against the throw force of the spring snap-in disc (3) into its inverted position. The contacts (7) are abruptly opened. The resistance ceramic (6) switched in parallel now sustains the operating voltage and deploys a defined electrical heating output on the switchgear regardless of the ambient temperature and permanently sustains it above its springback temperature so that the switchgear cannot reset back. The contacts remain open. The Thermal protectors can only cool down again and switch to the original closed state when the external operating voltage is no longer applied and/or disconnection from the mains.

Features:

Quick response sensitivity	featured by the brass housing and small protector mass
Excellent long term performance	due to fine silver contacts. Reproducible switching temperature values due to tempered, electrically and mechanically unstressed bimetal disc. Minimal contact burn
Instantaneous switching	with always constant contact pressure up to the nominal switching point, resulting in low contact stress
Very short bounce times	< 1 ms
Temperature resistance	by use of high temperature resistant materials and components

The listed products are an extract from our standard range. Other versions and customised manufacturing are available upon request.

Technical Data Type CR6

CR6

Type: Normally closed; does not reset automatically; voltage applied; with connector cables; with epoxy; without insulation

Installation height h from 6,3 mm
Diameter d 9,0 mm

Nominal switching temperature (NST) in 5 °C increments		70 °C - 180 °C
Tolerance NST ≤ 140 °C		±5 K
Tolerance NST > 140 °C		±10 K
Reverse switch temperature (RST) below NST (defined RST is possible at the customer's request)	UL	≥ 35 °C
	VDE	≥ 35 °C
Installation height		from 6,3 mm
Diameter		9,0 mm
Resistance to impregnation *		suitable
Suitable for installation in protection class		I
Pressure resistance to the switch housing *		600 N
Standard connection		Lead wire 0,75 mm ² / AWG18
Available approvals (please state)		IEC; ENEC; VDE; UL; CSA; CQC
Operational voltage range AC/DC		up until 250 V AC
Rated voltage AC		120 V / 230 V (VDE) 250 V (UL)
Rated current AC cos φ = 1.0/cycles		10,0 A / 1.000
Rated current AC cos φ = 0.6/cycles		6,3 A / 1.000
Max. switching current AC cos φ = 1.0/cycles		25,0 A / 1.000
Total bounce time		< 1 ms
Contact resistance (according to MIL-STD. R5757)		≤ 50 mΩ
Vibration resistance at 10 ... 60 Hz		100 m/s ²

Current sensitivity characteristic at I_{nom}:

dependent of...

- Thermal coupling
- Application area
- Built-in conditions
- Outer influences
- Wiring length / wiring diameter

Ordering example:

CR6 - 125.05 0100 / 0100 / 230V

Type / version _____
 NST [°C] _____
 Tolerance [K] _____
 Lead lengths [mm] _____ L₁ L₂
 Operating voltage [V] _____

Marking example:

 thermik
 Trade mark _____
 Type / version _____ R6
 NST [°C] . Tolerance [K] — 125.05

More varieties of the type series R6:

• SR6 – with connector cables; with epoxy; insulation: Mylar®-Nomex®
